 MEASUREMENT FORM AND SIZING CHART**

The length measurement is taken from **Wrist** along the inside of the arm to the inseam, **Axilla**, of the arm; measure with patient standing or sitting with arm down by the side.

Measurement Points

Circumference **Axilla** is taken around the upper arm at the axilla. For ease in determining this point, place a book up into the arm pit area. Point 'g' on the arm will be even with the top of the book.

Circumference **Wrist** is the point of greatest compression and therefore the most important point. This point is found distally on the arm where the wrist meets the hand. One should find the smallest circumference at this point. **Be sure not to measure too tight.**
