For thigh length, the length measurement is taken from the floor (inside of heel) along the inside of the leg to the inseam/groin, point 'g'; this length should end at the gluteal fold.

For calf length, the length measurement is taken from the floor (inside of heel) along the inside of the leg to approximately 3 ½ centimeters below the crease of the knee, point 'd'.

Measurement Points

Circumference point 'g' is found at the inseam/groin

Circumference point 'c' is the largest circumference of the calf

Circumference point 'b' is the point of greatest compression and therefore the most important point. This point is the smallest circumference of the ankle found closest to and above the ankle bone
